

Assignment 5: Due to Oct 28, 2019

*** * Please print your assignment and submit it to the lecturer on the due date, thanks for your cooperation.**

1. Explain why the null hypothesis should not be accepted when the effect is not significant.
2. What is more important in biological study, type I or type II errors? Give your reasons.
3. Collect some papers, and try to explain why two-tailed tests are much more common than one-tailed tests in scientific research. (List the papers or materials you cite)
